SCOTCH PINE—

The seven day wonder in Christmas Trees; the tree that is most in demand, and the tree that brings the highest price on the market.

Imported from Europe, seed has been in short supply since the start of the war, resulting in a shortage of seedling and transplant trees here.

It will be several years before we can supply the demand for seedlings and transplants and many more years until the grown trees will satisfy the market for Scotch Pine Christmas Trees.

Planted at a rate of 1000 trees per acre, approximately six to seven feet each way, they will make more profit on sand land than any other crop. If the trees are cut soon as they are large enough and branches trained up from stub left at cutting, several crops may be harvested from the same planting.

Christmas Tree Farming is fast coming into its own, and getting in on the ground floor while the business is young, means more profit for the wise man who is the EARLY BIRD.

If the land is level, shallow furrows can be plowed about six feet apart and the trees set in the furrows. If the land is too uneven or if loose blow sand, a man can still plant an average of 1000 trees a day with shovel or spade.

A considerable number of mechanical tree planters have been made, which can, by the help of two or more men, plant 20,000 or more trees per day, on fairly level terrain. These machines with planting crew, may be hired at a rate of six to ten dollars per 1000 trees, price depending on various factors involved.

A word to the wise is sufficient. We have a good supply of ~~transplants~~ this season; get your SCOTCH PINE now; we may not have enough next year.

Lowest price in the United States for commercially produced Scotch Pine ~~transplants~~, \$10.50 per 1000, minimum order; 10% discount on 10,000 or more. Half cash with order, balance C. O. D. by express at planting time in April or May.
